preserving life

A laboratory refrigerated heating circulator is a versatile laboratory tooldesigned to provide precise temperature control for a wide variety ofapplications. It can be used to control the temperature of a reactionvessel, to simulate different environmental conditions for cell cultures,and to cool or heat a variety of chemicals and samples. With the ability toset temperature over a wide range, the circulator can be used to preciselycontrol the temperature of a reaction, allowing for more accurate,repeatable results. It is also useful for cooling and heating a variety ofsamples, allowing for more accurate measurements of physical andchemical properties. The circulator can also be used to create a controlledenvironment for cell cultures, allowing for more accurate and repeatableresults. This makes the laboratory refrigerated heating circulator avaluable addition to any laboratory.

Specification

- **Temperature Range: -20DegC to +150degC**
- **Tank Capacities: 6Liters & 10Liters**
- **Controller: PID temperature controller/PCB**
- **Flow rate: 9 LPM**
- **Display: LED Bright**
- **MOC: Inner SS Outer Powder coating**
- **External Dimesions: 30 x50 x 70 cm approx for 6L & 40 x 50 x 70 cmapprox for 10L**
- **Accessories supplied as standard: Power cord, Silicon pipe with proper insulation**
